MUHAMMAD FADLY

SOC / Security Analyst

+60 10-915 2312 | m.fadly020@gmail.com | linkedin.com/in/paliii | github.com/MhdFadlyy | Gombak, Selangor, Malaysia

SUMMARY

Cybersecurity undergraduate (B.ICT Hons, Information Assurance & Security, IIUM, graduating Dec 2026) with six months in a government SOC: Wazuh SIEM monitoring, live incident response, and vulnerability assessment of 192 websites. Background in network engineering (AP/router deployment, hardening). Seeking full-time SOC / security analyst roles, available immediately.

EXPERIENCE

SOC Intern, Information Security & Cryptography Division **Apr 2026 – Oct 2026**

Dinas Komunikasi dan Informatika Provinsi Sumatera Utara (Diskominfo Sumutprov)

- Deployed Wazuh agents and triaged SIEM alerts across provincial government systems; caught a suspicious login on a government website through a Wazuh file integrity monitoring alert in week three and escalated it to senior analysts, who blocked the source IP.
- Traced a web defacement with planted backdoors against the cyber kill chain, extracted logs for analysis, assisted containment, and checked suspect files with VirusTotal.
- Mapped response steps for a cryptojacking compromise of the email cluster (5 Proxmox nodes) and drafted the escalation letters that triggered a cross-division incident meeting.
- Assessed 192 government websites with nmap, OWASP ZAP, WPScan, Nuclei and httpx; automated recurring checks in Python.
- Drafted ISO 27001-aligned SOP process diagrams (change management, document management, data masking) for an internal audit; compiled a 198-website status inventory to cut attack surface; documented Wazuh, Velociraptor and IRIS deployments.

Access & Network Intern, PT Atlantik Internasional Akses **Feb 2019 – Jul 2019**

- Hardened every new AP/router install (changed default admin credentials, configured encrypted wireless), averaging 5 installs per day with 100% connectivity.
- Diagnosed and resolved routing/AP escalations, minimizing client downtime.

SECURITY PROJECT

detection-lab-lite: detection-as-code mini-SOC **github.com/MhdFadlyy/detection-lab-lite**

- Built a Docker-only mini-SOC (Wazuh, Suricata, Falco, Cowrie and OpenCanary honeypots) with Sigma and custom Wazuh rules mapped to MITRE ATT&CK.
- CI replays Atomic Red Team and custom attacks against a victim host and asserts each alert fires (24/24 passing); auto-generates an ATT&CK Navigator coverage layer.

SKILLS

SIEM / Incident Response: Wazuh, Velociraptor, IRIS, MITRE ATT&CK, cyber kill chain, log analysis, incident documentation

Vulnerability Assessment: nmap, OWASP ZAP, WPScan, Nuclei, Acunetix, Gobuster, ffuf, Nikto

Networking: TCP/IP, Wireshark, Proxmox, OpenVPN, network hardening

Scripting & Governance: Python, Linux (Kali), ISO 27001 | **Languages:** English, Bahasa Indonesia, Bahasa Melayu

EDUCATION

Bachelor of ICT (Honours), International Islamic University Malaysia **Sep 2021 – Dec 2026 (expected)**

Relevant: Management of Information Security, Risk Management, Control & Audit of Information Systems, Web Application Development & Security, Computer Networking.

Access Network Engineering, Telkom 1 Medan Vocational School · 93.2/100 **Jul 2018 – Jul 2021**

ACTIVITIES & CERTIFICATIONS

Assistant Program Manager, Career Booster 2024 (300 attendees), IIUM Student Career Team; supported 37 international students as Mahallah representative committee member.

CCNAv7: Introduction to Networks, Cisco Networking Academy (Jan 2023)

OTHER PROJECTS

MOMent: Flutter pregnancy tracker app with offline/online AI chatbot (Jun 2025 – Jan 2026). **Baitul Ehsan:** admin and donation web platform for a non-profit (Mar 2024 – Aug 2024).
